In the January 25, 2024 presentation, under ‘Community Benefits – Recommendations’ – ‘Avoid Further Harm’ two bullet items were noted. These were:

- Mitigate noise and dust impacts to homes during and after construction
- Work with highly-impacted residents to determine mitigations during construction...if certain noise levels are exceeded.

My questions are:

- Who is determining who are the ‘highly-impacted residents’?
- What is the noise level criteria? Will it be the same used to determine if sound walls are required?

Thank you!

Karen Gibson
